

## **Lesson 30 Machine Learning Projects**

From all the lessons create a project that uses all the things you have learned.

You can use the following ideas.

### **Project1**

A spelling checker, that will actually corrects spelling automatically.

### **Project 2**

A chatbot that uses a data base to lookup answers to questions

### **Project3**

A knowledge base where you can add information and extract information with queries.

### **Project4**

A game where the AI Agent predicts your next move.

### **Project 5**

A real estate program that can predict house prices by images of homes.
